SORLEEX MART Sales Performance Dashboard

The dashboard combines headline KPIs, location comparisons, order-status distribution, monthly delivery and return patterns, category mix, and interactive filters.

Introduction

Businesses need reliable information about sales performance to understand how revenue is generated, which locations contribute the most, and how efficiently customer orders are processed and delivered. Without effective monitoring, businesses may struggle to identify underperforming locations, track returned orders, monitor pending deliveries, and understand product-category contributions.

This project uses Microsoft Power BI to analyze SORLEEX MART sales data and present important business metrics through an interactive dashboard. The analysis focuses on revenue, order volume, order statuses, locations, product categories, and monthly operational patterns.

Project Objectives

• Monitor overall sales performance using key performance indicators.

• Analyze revenue distribution across business locations.

- Examine order distribution across different statuses.
- Track returned and delivered orders across months.
- Analyze processed orders across product categories.
- Identify locations with higher numbers of pending orders.
- Build an interactive dashboard for exploring performance by year, month, category, and location.

Dashboard Overview

The dashboard contains five KPI cards, four slicers, and six analytical visualizations. Together, these components provide a consolidated view of sales and operational performance.

1. Key Performance Indicators (KPIs)

KPI	Displayed value
Total Revenue	■6M
Total Orders	1K
Returned Orders	174
Delivered Orders	167
Pending Orders	162

The KPI cards provide a quick overview of revenue, order volume, and selected order outcomes. Values are shown as rounded display values where applicable.

2. Revenue by Location

Location	Revenue
Port Harcourt	■0.84M
Kano	■0.74M
Ibadan	■0.74M
Lagos	■0.73M
Enugu	■0.70M
Benin City	■0.69M
Abuja	■0.67M
Location	Revenue
Ilorin	■0.64M

Port Harcourt recorded the highest displayed revenue at approximately ■0.84M, while Ilorin recorded the lowest at approximately ■0.64M. This comparison helps management identify stronger-performing markets and locations that may require additional sales attention.

3. Revenue by Status

Order status	Revenue share
Cancelled	18.02%
Delivered	17.02%
Pending	16.84%
Returned	16.36%

Shipped	16.07%
Processing	15.68%

Cancelled orders represent the largest displayed share at 18.02%, while processing orders represent the smallest at 15.68%. Management should investigate cancelled and returned transactions and review factors affecting order fulfillment.

4. Returned Orders by Month

Month	Returned orders
July	18
May	16
April	15
January	15
March	11
September	11

July recorded the highest number of returned orders, with 18, while March and September recorded the lowest, with 11 each. This pattern can guide investigation into product quality, customer expectations, and delivery-related issues.

5. Delivered Orders by Month

Month	Delivered orders
January	20
April	19
July	18
September	17
March	16
May	16

January recorded the highest number of delivered orders, with 20. March and May recorded the lowest, with 16 each. Monitoring these variations can help management evaluate delivery performance over time.

6. Processed Orders by Category

Product category	Distribution
Books	21.56%
Beauty	17.96%
Fashion	17.37%
Home & Kitchen	16.17%
Sports	16.17%
Electronics	10.78%

Books account for the largest share of processed orders at 21.56%, while Electronics account for the smallest share at 10.78%. This helps management understand how processed orders are distributed across product categories.

7. Pending Orders by Location

Location	Pending orders
Ilorin	23

Abuja	22
Ibadan	22
Kano	20
Port Harcourt	20
Benin City	19
Lagos	19
Enugu	17

Ilorin recorded the highest number of pending orders, with 23, followed by Abuja and Ibadan with 22 each. Enugu recorded the lowest number, with 17. These figures can help management prioritize locations for follow-up and fulfillment support.

Interactive Features

Slicer	Purpose
Year	Filter sales performance by year.
Month Name	Analyze performance for selected months.
Product Category	Examine performance across product categories.
Location	Compare performance across locations.

The slicers allow users to filter the dashboard dynamically and explore selected business segments. Visualizations update in response to selected filters, supporting focused analysis.

Key Business Insights

• The dashboard displays approximately ■6M in total revenue and 1K total orders.

• Port Harcourt has the highest displayed location revenue, while Ilorin has the lowest.

• Cancelled orders account for the largest share of revenue by status in the displayed distribution.

• July has the highest number of returned orders among the months shown.

• January has the highest number of delivered orders among the months shown.

• Books have the largest share of processed orders, while Electronics have the smallest.

• Ilorin has the highest number of pending orders among the locations shown.

Business Recommendations

Improve order management: Investigate reasons behind cancelled and returned orders to identify avoidable revenue loss and improve customer experience.

Strengthen delivery operations: Review locations with higher pending-order counts and assess whether staffing, stock availability, or delivery coordination needs attention.

Review product returns: Investigate why July recorded the highest number of returned orders and use findings to reduce future returns.

Optimize category performance: Evaluate demand and customer feedback across categories, then develop targeted strategies for categories with lower processed-order shares.

Share practices across locations: Study operational practices in stronger-performing locations and assess whether they can be adapted elsewhere.

Monitor performance regularly: Use the dashboard in periodic business reviews to track changes and identify emerging issues.

Conclusion

This project demonstrates how Microsoft Power BI can transform sales data into meaningful business insights through interactive dashboards and data visualization. The analysis provides an overview of SORLEEX MART's revenue performance, order distribution, product-category contributions, monthly delivery and return patterns, and location-level operational performance.

The dashboard gives stakeholders a consolidated view of important metrics, helps identify potential operational challenges, and supports more informed business decisions. The project also demonstrates the value of communicating analytical findings in a clear and actionable way.

Tools and Technologies

Tool / technique	Application
Microsoft Power BI	Dashboard development and data visualization.
Power Query	Data cleaning and transformation.
DAX	Measures and calculations.
Data modeling	Organizing data relationships for analysis.
Power BI slicers	Interactive filtering and exploration.
Data visualization	KPI cards, bar charts, line/area charts, and doughnut charts.

How to Interact with the Dashboard

- Open the Power BI project file (.pbix) using Microsoft Power BI Desktop.
- Use the Year, Month Name, Product Category, and Location slicers to filter the dashboard.
- Explore the visualizations to compare revenue, order statuses, monthly delivery and returns, categories, and pending orders.
- Clear or adjust slicers to return to a broader view of the business.
